

Cross-seed evidence matrix

Question	Measure	Cross-seed result	Verdict
RQ1	Clean decision relevance	Near type-matched random baseline	Not validated
RQ2	Paired stale-node attention	Positive in 4/6 trained policies	Mixed by seed
RQ3	Duration and paired DEF	Paired decline in 4/6 policies	Not consistent
RQ4	Training comparison	No consistent improvement	Not supported

Conclusion: raw attention does not provide consistent decision-relevance or degradation responses.
